

# In The Spot-Light!

News Release: February 15, 2008

[www.LightRiver.com](http://www.LightRiver.com)

## LightRiver & Infinera Join in Unique Partnership

### Where to Find Us

[APTA \(American Public Transportation Association\)](#) –  
TransITech Conference  
2/20/08  
Anaheim, CA

[Comptel](#)  
2/24/08 – 2/26/08  
Nashville, TN

### What LightRiver Offers

- ▶ Next-Generation Network Design
- ▶ Premier "Carrier-Grade" Equipment
- ▶ Certified Professional Services
- ▶ Training and Support Services

*Interested in our offerings?  
[Contact us to learn how to engage!](#)*

### About LightRiver

LightRiver specializes in transport solutions for mission-critical network operators across North America. As a System Integrator of Optical, Data and Wireless transport life-cycle solutions, LightRiver helps guide clients from initial market entry strategy, infrastructure design, installation and integration, program and network management, combined with maintenance and logistical support for their carrier-grade networks. LightRiver is proud to apply its years of experience with transport networks for the benefit of its 100+ clients in the Utility, Independent Telecom Service Provider and Government marketplace.

In an effort to constantly improve levels of service, support and expertise, Infinera has contracted with LightRiver Technologies as North American Value Added Integrator.

As the only integrator partner in North America, LightRiver is proud to have added Infinera's leading Regional "digital" ROADM products to its portfolio of carrier-grade transport solutions. This partnership leverages the strengths and success of Infinera's product line and LightRiver's expertise in creating, integrating and delivering integrated, mission-critical, optical transport solutions.

LightRiver supports clients nationwide in the telecom service provider, carriers'-carrier and utility communities, designing and delivering 99999's transport solutions by integrating products from the leading, standards-based, manufacturers into a best overall value network. The DTN product line fills a valuable need for the markets we serve, as Infinera customers are finding that the DTN product is the world's highest density, and most flexible, switched DWDM system available today with unrivalled speed of service availability. Infinera has developed the first "digital" Remotely Configurable Optical Add/Drop Mux (ROADM), and integrates scaleable multi-wavelength DWDM transport with fully reconfigurable sub-wavelength digital switching and GMPLS-enabled end-end service intelligence and automation. The result is reduced capital expenditure (CapEx) and operational expenditure (OpEx) and increased service velocity.

The addition of Infinera's Regional ROADM solution set to LightRiver's comprehensive portfolio of transport products will expand the services available to independent network operators nationwide. LightRiver has completed sales, engineering and design, and installation and engineering training with Infinera, and looks forward to growing a quality partnership, based on technical expertise and common strategic goals.

**LightRiver will debut the partnership at the upcoming 2008 Comptel Spring Conference in Nashville, TN, February, 24-26.**

### About Infinera:

Infinera provides Digital Optical Networking systems to telecommunications carriers worldwide. Infinera's systems are unique in their use of a breakthrough semiconductor technology: the Photonic Integrated Circuit (PIC). Infinera's systems and PIC technology are designed to provide optical networks with simpler and more flexible engineering and operations, faster time-to-service, and the ability to rapidly deliver differentiated services without reengineering their optical infrastructure.
